

ROTARY FLOWPACK MACHINE

flowpack R

THE COMPACT SOLUTION FOR HIGH-SPEED PACKAGING

flowpack R

The flowpack machine flowpack R achieves high speeds in an extremely compact design due to the rotating transversal sealing.

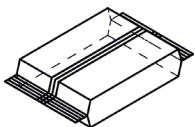

Reproducible results are guaranteed from the very first pack. Options such as seamless traceability and product monitoring during the packaging process are also available.

The flowpack R is available in two versions: with longitudinal sealing above or below. Both versions can be equipped on a modular and individual basis. Examples here are finger conveyor chains or infeed belts, thermal transfer printer, labelling machine and automatic film roll changer for continuous film unwind, i.e. non-stop operation.

Our flowpack machines are also available as hygienically designed version.

HIGHLIGHTS

- High-speed packaging thanks to rotating transversal sealing
- Optimum processing of the most diverse of film thickness and film types as well as coated paper
- Customised design of fin seal for excellent product packaging stability and appearance
- Smart user guidance via CoPilot and touch screen
- Free remote service
- Maximum serviceability and maintainability thanks to perfect access and numerous maintenance-free components
- Easy line integration and connectivity with higher-level systems, Industry 4.0 Ready
- Optional monitoring, analysis and visualisation of machine and operating data via the Hugo Beck Cockpit

TECHNICAL DATA

Product infeed	manual as standalone/automatic in line
Film/Paper	e.g. PP, composite films, Tyvek®, coated paper
Product size	L: from 45 mm, W: 10 – 250 mm, H: max. 80 mm
Capacity	up to 18.000 cycles/h
Versions	longitudinal sealing above or below
