

FILM OR PAPER?

STAY FLEXIBLE!

FLOWPACKS, BAGS AND SHRINK PACKS IN FILM, PAPER AND COMPOSITE MATERIALS

With Hugo Beck you can choose which type of packaging and material is best suited for your specific product and application. Whether packaging in film, paper or composite material, our machinery solutions are highly flexible, efficient and cost-effective. And with the ability to be adapted to new packaging materials and changing requirements by easy changeovers, they are also future-proofed. It is also possible to convert existing film packaging machines to use a new packaging substrate.

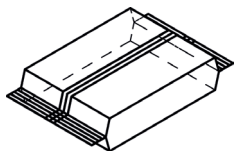

With over 60 years of experience in customised and flexible film packaging solutions, Hugo Beck is well known for providing the highest quality in packaging appearance, machine availability and efficiency. However, fewer people are aware that it has also been possible for some time to use certain Hugo Beck machine solutions to produce packaging from paper materials.

Our latest paper packaging solutions underline the fact that we deliver innovative machine technology, enabling our customers to make a productive contribution to packaging sustainability, all while keeping an eye on costs, ensuring packaging quality and opening up new markets.

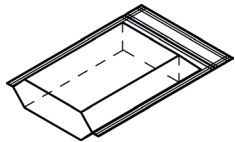

YOUR BENEFITS

- Sustainable investment with an eye on the future: Produce both film and paper packaging on a single machine.
- Multi-purpose: With a single machine produce different types of packaging.
- Cost-effective: Convert older film packaging machines to deliver paper packaging applications.

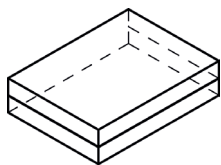

FILM PACKAGING
